Casework With a Conscience

An Intelligent Approach to Sustainability

There's a reason Neocase products have a lifetime warranty. They are intended to be used, re-used and reconfigured for decades. The greatest sustainability of all is to build in an environmentally friendly manner and never—***ever***—have to throw a product out. Neocase designs, engineers, manufactures, stores, and ships its products in an environmentally friendly manner, believing that these efforts will enhance the quality of life for us all. Our company continues to work on ways to reduce waste and eliminate negative impacts on the environment.

Neocase products are re-usable, and made from environmentally friendly materials, such as:

- Printed decorative papers on our products use 100% water-based inks.
- Heavy metals are eliminated from the ink pigments in our raw materials.
- Through lamination and edgebanding, Neocase reduces core offgas to less than 1 ppm.
- Installation hardware is powder coated (vs. plated) on many of our component parts.
- Our packaging products consist of 35% recycled material.
- All of our USA particleboard suppliers are Green Cross Certified, meaning their materials are 100% recycled and recovered from wood used previously in manufacturing board.
- Neocase offers an optional substrate that contains no added urea formaldehyde.

Neocase products may qualify for credits in the Leadership in Energy and Environmental Design (LEED) rating system.
