Focus Lumbar

Perfectly Designed ... for Support.

Adjustable Lumbar Support for:

- Focus Executive
- Focus Highback
- Focus Midback
- Focus Stool

The adjustable Focus® Lumbar Support comfortably maintains the natural curve of the spine. It improves upon other lumbar designs because each side is individually customizable. The right and left supports can be adjusted independently to achieve the most ergonomic and comfortable position possible.

The lumbar support can be adjusted a full 5", beginning 4.5" above the seat. The chair's ergonomic design incorporates tight mesh and requires about 15 lbs. of force to adjust. As the sliders move, the mesh tension is increased, providing exceptional support.

The Focus Lumbar Support easily passed the ANSI/BIFMA test for back durability. But we didn't stop there. Our cyclic functionality test robotically positioned and re-positioned the support 2,000 times. (The average user sets it and forgets it.) We also wanted to ensure that the mesh back would hold up against wear, so we performed a 10,000 cycle load-ease test. Afterward, the mesh still looked like new.

The Focus Lumbar Support is now available as a factory installed option. Existing Focus Executive, Highback and Midback chairs and Focus Stools can easily be retrofitted in minutes with a simple kit. Only six screws need to be removed to install the kit.

The Focus collection offers outstanding ergonomics, exceptional comfort and a stylish yet affordable aesthetic.

STOOLS | Feature Spotlight

SitOnIt Stools:
Café and task stools that complement task and side chairs.

Stools are the height of fashion for lunchrooms and cafeterias, high-topped work stations, labs and drafting areas.

Focus Café Stool

Focus Task Stool

SitOnIt has stools that match task and side chairs across many of our collections. Task stools come with basic (B), posture back (P) or intensive (I) mechanisms and can be found in plastic, mesh, upholstered back or fully upholstered models.

Task stools sit on a 5-star base while café stools stand on 4 legs or a sled base. The Focus Side, Anytime, Freelance, InFlex and OnCall collections include café stools.

Extra-large casters and steel reinforcement are standard for 24/7 HD models. Non-Stop Heavy Duty, @Work and TR2 HD stools are rated for 350 lbs. weight capacity.

Another way to configure a stool is through a stool kit or extended stool kit for a task chair. The Focus Work, InFlex, Knack, OnCall, ReAlign, Sona and Volley collections all offer these task chair options.

Most stools are midback, but both midback and highback styles are available in Focus Work.

SitOnIt • Seating™

BARIATRIC | Feature Spotlight

Freelance 42" bariatric chair rated to 1,000 lbs.

Bariatric Seating: Chairs and stools designed for a growing market.

Bariatics is one of the fastest growing areas of health care, so it follows that bariatric seating would be a key design spec. But pretty much every company has obese customers or employees who require a safe and comfortable chair. Lobby areas, especially, need bariatric side chairs. This creates an opportunity with every sale.

According to the online industry journal MMQB, over half of those surveyed have "recently specified bariatric seating on a project".[1]

In weighing the bariatric seating market keep in mind what the requirements are and how SitOnIt can tip the scales to our advantage.

Weight capacities that range from 350 to 1,000 lbs.

- ☑ All SOI Heavy Duty chairs have a 350 lb. weight capacity; Non-Stop is rated to 500 lbs., and Freelance offers both 500 and 1,000 lb. capacity.

Seat widths should be a minimum of 26" and extend to 40" or beyond

- ☑ Freelance bariatric models come in 30" and 42" widths.

Steel frames – or steel reinforcement added to formed hardwood seat pans

- ☑ Besides steel reinforcement, SOI Heavy Duty task chairs include extra-large casters with 25% more weight capacity.

Easy ingress and egress, providing stability and balance

- ☑ Strong arm construction and sturdy bases are used for HD and bariatric models.

Continued on back page.

SitOnIt • Seating™

A weighty solution.

Freelance 30" bariatric chair rated to 500 lbs.

Focus Work heavy duty option

Knack

@Work

Glove

TR2

High density foam to prevent compression and loss of height and load over time

- ☑ TR2 and Freelance can be ordered with additional seat foam.

Testing to ensure chairs will withstand the extra pressure and weight.

- ☑ All of our chairs meet and exceed BIFMA/ANSI standards, but BIFMA does not specifically have tests for heavy duty and bariatric chairs. We use our own rigid in-house standards which include arm and leg strength, functional load and seat impact tests.

Anti-microbial and anti-bacterial textiles

- ☑ Many Heavy Duty chairs can be specified with polyurethane and vinyl textiles.

Specify Heavy Duty chairs and stools for lounge and waiting areas, classrooms and conference rooms, and anywhere there are multi-shift operations. Bariatric chairs are ideally suited for educational and commercial use as well as healthcare.

Although still in the growth stage, the market for bariatric furniture is estimated to be $400 million.[2]
