ESSENTIA BENCHING SYSTEM

The need to create collaborative work environments that optimize every square foot of space has changed the landscape of today's office. Unfortunately, these needs are often met at the expense of worker productivity and with products that restrict future flexibility.

Recognizing these challenges, we set out to develop a solution that would address these issues while enabling the creation of collaborative, open space environments.

The answer was simple.

Based on our most popular foot design, we created a patented pending dual platform foot and connector system that can easily convert individual workstations to a benching system with all of the essential components located just below the work surface, resulting in the most flexible and cost effective benching system available today.

No more bulky frames, complex power distribution systems, or workcenters so large they are impossible to move.
