ADJUSTABLE HEIGHT WORKCENTERS

TRANQUILITY SCREEN SYSTEM

ACOUSTIC & VISUAL PRIVACY

Acoustic wall display; brackets allow for screens to be tiered up to 3 levels.

Visual and acoustical distractions in office environments have been proven to affect worker health and productivity. Constant interruptions can lead to an inability to focus and increase stress levels. Increased stress levels can lead to health issues and result in lost time and productivity. Distractions caused by movement in the peripheral vision are an aspect of visual privacy that is often overlooked.

The Tranquility Screen System is designed to provide a flexible, yet highly effective way to control noise and minimize visual distractions. It incorporates both front and side privacy screens, enabling users to remain focused, work with fewer distractions, and be more productive in an open office floorplan.
